## **Injectable Steroids**

Injectable steroid is the most common form of steroid that is widely used by athletes and body builders. Individuals prefer injectable steroids because the effects from injectable steroids are significant and long lasting. The major benefit of injectable steroid is that it does not cause the liver toxic. Injectable steroids are directly injected in the muscles which makes them more effective. Injectable steroids are further categorized in two forms that are long-lasting and short-lasting form.

Long lasting form of injectable steroids provides quality gains, and increase in the muscle strength and endurance gradually and takes some time to show the results. The short-lasting injectable form can show the instant results but the gains from short-lasting form is for shorter period of time and the gain disappears after the discontinuation of injections.

## **Cycles for injectable steroids**

The cycle for injectable steroids vary on the fact that whether the individual is willing to use steroids for the bulking phase or the cutting phase. The recommended and most common duration of a cycle is around 8-12 weeks. It can be extended or reduced depending on the results and the side effects. A post cycle therapy is highly recommended after the completion of one cycle.
